- **Research topics:** Breast cancer outcomes and biomarkers
- Conceptualized overarching research goals and hypotheses, developed analysis plans, conducted formal analyses, and wrote formal epidemiologic research manuscripts
- Communicated research project findings internally and at national conferences
- Applied state-of-the-art time-to-event analysis, longitudinal mixed-effects models, machine learning, meta-analyses, and data visualization approaches in epidemiologic research relating to breast cancer outcomes and biomarker exposures
- Used high performance computing environment for large-scale data

GRADUATE RESEARCHER

2013-2018

Department of Epidemiology, Advisor: Kari E. North

- **Dissertation topics:** Infant anthropometric growth as 1) a factor associated with sociodemographic risk factors, 2) an exposure hypothesized to modify lipid levels in adolescence and 3) an effect modifier of the association between genetic risk variants and lipid levels
- Conceived scientific hypotheses, developed analysis plans, analyzed data, and wrote first draft of manuscripts
- Applied structural equation models, factor analysis, and non-linear random effects models to estimated different patterns of infant growth and their association with lipid levels in adolescence
- Documented all writing and statistical analytic work with reproducible reports written in R, Markdown and LaTeX and tracked in Git

Department of Psychiatry, Center of Excellence for Eating Disorders (CEED)

- Collaborated in the planning and interpretation of statistical analyses for research papers authored by faculty, post-doctoral fellows, graduate students and undergraduate students
- Analyzed data with regression and structural equation models in SAS and R
- Wrote the statistical methods sections, prepared data visualizations, and ensured data integrity for peer-reviewed manuscripts
